At Air Products, we are focused on human and product safety and respect for the environment. Our team of safety experts reflects decades of design and operating experience in hydrogen production and handling. The KnowH₂ow Hydrogen Safety Training Programs are based on this experience. We offer a variety of programs for hydrogen energy that allow you to obtain a range of information, from general hydrogen handling and safety to a more detailed look at how to safely handle, design, and operate hydrogen systems.

Three types of programs are available: the introductory program is one half-day, the basic program is a full day, and the comprehensive program is two full days. Each program includes standard modules and options to customize your program. The chart below provides a list of programs and modules.

### Safety Training Program Schedule

Class Size:
- Minimum: 10 people
- Maximum: 20 people
Other Programs Available

Additional KnowH2ow Safety Services include:
- KnowH2ow Safety Training Refresher Courses
- Training for Current Fueling Station Owners
- Equipment and Operational Review
- On-site System Audits
- Safety Consultation
- Operational Readiness Inspections (ORIs)

We offer customized training services to meet your specific needs.

Safety Leadership

At Air Products, we have earned more safety-related awards than any other industrial gas company for the safe handling of hydrogen and other gases. We are focused on human and product safety; let us help you achieve the same commitment.

Hydrogen Leadership

As a worldwide leader in all aspects of the global hydrogen market, we bring you 50 years of expertise and experience in the safe handling, design, engineering, and operation of hydrogen facilities and all modes of hydrogen distribution.

Find Out More

For more than 50 years, Air Products has been helping customers to reduce costs, increase productivity, and improve product quality through innovative industrial gas supply and applications technology. Air Products will be happy to assist you in meeting your fuel cell, hydrogen, and other industrial gas needs.
